**QUESTION 11** You are planning to deploy new servers that will run Windows Server 2008 R2. Each server will have 32 GB of RAM. The servers must support installation of the following role services:- Routing and Remote Access- Remote Desktop Services Gateway- Minimize CPU and RAM usage You need to deploy the minimum edition of Windows Server 2008 R2 that meets the requirements. What should you recommend? (More than one answer choice may achieve the goal. Select the BEST answer.) A. A Server Core installation of Windows Server 2008 R2 Datacenter. B. A Full Installation of Windows Server 2008 R2 Enterprise. C. A Full Installation of Windows Server 2008 R2 Standard. D. A Server Core installation Windows Server 2008 R2 Web. Answer: C

**QUESTION 12** A company has client computers that run Windows 7. The company has Windows Server Update Services (WSUS) 3.0 with Service Pack 2 (SP2) deployed on a server that runs Windows Server 2008 R2. You are designing an update management solution for the company's client computers. The solution must meet the following requirements:- Client computers must use WSUS for the installation of updates.- Only administrators should receive update notifications from WSUS. You need to design an update management solution that meets the requirements. What should you recommend? (More than one answer choice may achieve the goal. Select the BEST answer.) A. Define the WSUS settings in the Computer Configuration area of the Group Policy Management Console. B. Define the WSUS settings in the User Configuration area of the Group Policy Management Console. C. Define the WSUS settings in the User Configuration area of the Local Group Policy on client computers. D. Define the WSUS settings in the Computer Configuration area of the Local Group Policy on client computers. Answer: A

**Explanation:** FROM Step by Step guide to setting up WSUS 3.0 SP2 <http://technet.microsoft.com/enus/library/cc708519%28v=ws.10%29> or <http://blogs.microsoft.co.il/blogs/yanivf/archive/2007/09/23/install-wsus-3-0-stepbystep.aspx> To configure Automatic Updates In Group Policy Object Editor, expand Computer Configuration, expand Administrative Templates, expand Windows Components, and then click Windows Update. In the details pane, double-click Configure Automatic Updates. Click Enabled, and then click one of the following options: Notify for download and notify for install: This option notifies a logged-on administrative user before the download and before the installation of the updates. Auto download and notify for install: This option automatically begins downloading updates and then notifies a logged-on administrative user before installing the updates. Auto download and schedule the install: If Automatic Updates is configured to perform a scheduled installation, you must also set the day and time for the recurring scheduled installation. Allow local admin to choose setting: With this option, local administrators are allowed to use Automatic Updates in Control Panel to select a configuration option of their choice. For example, they can choose their own scheduled

installation time. Local administrators are not allowed to disable Automatic Updates. Click OK. Set Up E-Mail Notifications <http://technet.microsoft.com/en-us/library/cc708608%28v=ws.10%29.aspx> In the WSUS Administration console, click Options in the left pane. In the center pane, click E-Mail Notifications. Click the General tab. If you want update notifications, select the Send e-mail notification when new updates are synchronized check box. In the Recipients box, type the e-mail addresses of the people who should receive update notifications. Separate the names with semi-colons. If you want status reports, select the Send status reports check box. In the Frequency box, select either Daily or Weekly. In the Send reports at box, set the time at which you want status reports to be sent. In the Recipients box type the e-mail addresses of the people who should receive status reports, delimited by semicolons. In the Language box, select the language in which the status reports should be sent. Click Apply to save these settings.

QUESTION 13 A company has Remote Desktop Services (RDS) servers that run Windows Server 2008 R2 and client computers that run Windows 7. You are designing a non-production remote desktop infrastructure that you will use for evaluation purposes for 180 days. The remote desktop infrastructure must meet the following requirements:- Maximize the security of remote desktop connections.- Minimize changes to the company's firewall configuration.- Provide external users with a secure connection from the Windows 7 Remote Desktop client to the RDS environment. You need to design a temporary remote desktop infrastructure that meets the requirements. Which services should you recommend? (More than one answer choice may achieve the goal. Select the BEST answer.) A. Remote Desktop Gateway, Remote Desktop Licensing, and Remote Desktop Session Host B. Remote Desktop Licensing, Remote Desktop Session Host, and Remote Desktop Web Access C. Only Remote Desktop Gateway and Remote Desktop Session Host D. Only Remote Desktop Session Host and Remote Desktop Web Access Answer: C

QUESTION 14 A company has a single Active Directory Domain Services (AD DS) domain. Each department within the company has its own organizational unit (OU). All client computers run Windows 7 Enterprise Edition and Microsoft Office 2010. The company wants to restrict access to some Office 2010 features. They develop a standard list of corporate restrictions. You have the following requirements:- Apply the corporate restrictions to all existing and future departments.- Ensure that specific restrictions can be added or removed for individual departments.- Ensure that the corporate restrictions are not applied to users and computers in the built-in Active Directory containers.- Minimize administrative effort for applying restrictions to future departments. You need to recommend a Group Policy object (GPO) deployment that meets the requirements. What should you recommend? (More than one answer choice may achieve the goal. Select the BEST answer.) A. Create a GPO that contains the corporate restrictions and link it to the domain. Install the Office 2010 Group Policy Administrative Template settings. Create a separate GPO for each department that deploys and configures Office 2010. B. Install the Office 2010 Group Policy Administrative Template settings. Create a Starter GPO that contains the corporate restrictions. Create a separate GPO based on the Starter GPO for each department that deploys and configures Office 2010. C. Install the Office 2010 Resource Kit and create a custom transform (.mst) file for each department. Create a Starter GPO that contains the corporate restrictions. Create a separate GPO based on the Starter GPO for each department that deploys Office 2010 by using the transform file. D. Install the Office 2010 Resource Kit and create custom installer files for each department. Create a GPO that contains the corporate restrictions and link it to the domain. Create a separate GPO for each department that deploys the installer files. Answer: B

Explanation: Starter GPOs are used as a base template to build other GPOs from. admin templates (ADMX & ADML files) need to be applied so that the settings specific to Office 2010 can be applied

QUESTION 15 Your network consists of a single Active Directory domain. The functional level of the domain is Windows Server 2008 R2. All domain controllers run Windows Server 2008 R2. A corporate policy requires that the users from the research department have higher levels of account and password security than other users in the domain. You need to recommend a solution that meets the requirements of the corporate policy. Your solution must minimize hardware and software costs. What should you recommend? A. Create a new Active Directory site. Deploy a Group Policy object (GPO) to the site. B. Create a new Password Settings Object (PSO) for the research department's users. C. Create a new organizational unit (OU) named Research in the existing domain. Deploy a Group Policy object (GPO) to the Research OU. D. Create a new domain in the forest. Add the research department's user accounts to the new domain. Configure a new security policy in the new domain. Answer: B

Explanation: <http://technet.microsoft.com/en-us/library/cc770842%28WS.10%29.aspx>

<http://technet.microsoft.com/en-us/library/cc754461%28WS.10%29.aspx>

Exceptional PSOs: If you want a certain group member to conform to a policy that is different from the policy that is assigned to the entire group, you can assign the exceptional PSO directly to a particular user or you apply a PSO directly to the user (if you apply it to a group that the user is a member of), it takes precedence over all other PSOs that are applied to the user. (Note: PSOs that are applied to a group are not applied to individual users.)

To create a PSO using ADSI Edit

1. Click Start, click Run, type `adsiedit.msc`, and then press Enter.
2. In the ADSI Edit snap-in, right-click the left pane, and then click New Object.
3. In Name, type the fully qualified name of the PSO, such as `Research`.
4. Click OK.
5. Double-click CN=System.
6. Double-click CN=Password Settings Objects.
7. Click CN=Password Settings Object.
8. Right-click CN=Password Settings Object, and then click New.
9. In the Create Object dialog box, click Password Settings Object.
10. In Value, type the name of the PSO, such as `Research`.
11. Continue with the wizard, and then click Finish.

To create a PSO using ADSI Edit

1. Click **Start**, click **Run**, type **adsiedit.msc**, and then click **OK**.

**Note**

If you are running ADSI Edit for the first time on a domain controller, proceed to step 2. Otherwise, proceed to step 4.

2. In the ADSI Edit snap-in, right-click **ADSI Edit**, and then click **Connect to**.

3. In **Name**, type the fully qualified domain name (FQDN) of the domain in which you want to create the PSO, and then click **OK**.

4. In the left pane, click **Domain**.

5. Right-click **Domain**, and then click **New**.

6. Double-click **CN=System**.

7. Click **CN=Password Settings Container**.

All the PSO objects that have been created in the selected domain appear.

8. Right-click **CN=Password Settings Container**, click **New**, and then click **Object**.

9. In the **Create Object** dialog box, under **Select a class**, click **msDS-PasswordSettings**, and then click **Next**.

10. In **Value**, type the name of the new PSO, and then click **Next**.

11. Continue with the wizard, and enter appropriate values for all **mandatory** attributes.

QUESTION 20 Your network consists of a single Active Directory domain. The relevant portion of the Active Directory domain is configured as shown in the following diagram. The Staff organizational unit (OU) contains all user accounts except for the managers' user accounts. The Managers OU contains the managers' user accounts and the following global groups:- Sales- Finance- Engineering You create a new Group Policy object (GPO) named GPO1, and then link it to the Employees OU. Users from the Engineering global group report that they are unable to access the Run command on the Start menu. You discover that the GPO1 settings are causing the issue. You need to ensure that the users from the Engineering global group are able to access the Run command on the Start menu. What should you do?

A. Configure GPO1 to use the Enforce Policy option. B. Configure Block Inheritance on the Managers OU. C. Configure Group Policy filtering on GPO1 for the Engineering global group. D. Create a new child OU named Engineering under the Employees OU. Move the Engineering global group to the new Engineering child OU. Answer: C Explanation: MCITP Self-Paced Training Kit Exam 70-646 Windows Server Administration No administrator likes exceptions, but we are required to implement them. Typically you might have configured security filtering, Windows Management Instrumentation (WMI) filters, block inheritance settings, no-override settings, loopback processing, and slow-link settings. You need to check that these settings are not affecting normal GPO processing.
