<https://drive.google.com/drive/folders/0B75b5xYLjSSNX29kQ21idGhUWlU?usp=sharing> Case Study 1 - Contoso, Ltd.

(QUESTION 1 ~ QUESTION 9) Overview Contoso, Ltd. is an international computer manufacturer that has 3,000 employees.

Contoso plans to develop a Universal Windows Platform (UWP) app named App1 to manage the details of the computers sold by the company. App1 will display all of the available computer models on its main page. Users will be able to select a computer model to see its details. On the details page for each computer, there will be a picture of the respective computer. The users will be able to use touch gestures to rotate the picture and to click a button to hear a description of the computer model. Contoso also plans to develop a REST service to provide data to App1. The data will be stored in a Microsoft SQL Server database.

Requirements

Conceptual Design Requirements Contoso identifies the following conceptual design requirements for App1:

- App1 will use the Model-View-ViewModel (MVVM) pattern.
- App1 must be developed in C# and XAML.
- App1 must be able to run on all supported Windows 10 devices, including desktop PCs, tablets, and mobile devices.
- From Microsoft Visual Studio 2015, you must be able to...

Technical Requirements Contoso identifies the following technical requirements for App1:

- App1 must be developed in C# and XAML.
- App1 must be able to run on all supported Windows 10 devices, including desktop PCs, tablets, and mobile devices.

Data Model The following class was developed to store information about the computers

```
class Computer
{
    string model;
    public string Model
    {
        get
        {
            return model;
        }
        set
        {
            model = value;
        }
    }
    public override string ToString()
    {
        return Model;
    }
}
```

The data must be accessed only through the REST API, not by using a direct SQL Server connection. Main Page Requirements The main page file will be named MainPage.xaml. The following data context will be used for the main page.

```
class ContosoAppContext
{
    List<Computer> computers = new List<Computer>()
    {
        new Computer() { Model = "Model A" },
        new Computer() { Model = "Model B" },
    };
    public List<Computer> Computers
    {
        get
        {
            return computers;
        }
        set
        {
            computers = value;
        }
    }
}
```

Details Page Requirements The Details page will use the following media element. <MediaElement x:Name="media">Development Requirements Contoso identifies the following technical requirements for the development process of App1:

- Code files must be stored in a public cloud.
- Developers must be able to work simultaneously on the code files.

For the REST service. Contoso plans to outsource the development. Contoso identifies the following technical requirements:

Tests Requirements Contoso identifies the following requirements for testing:

Build Process Contoso defines the following build process:

need to recommend a solution to meet the testing requirements. What should you include in the recommendation? A. a web performance test B. load testing C. IntelliTrace D. IntelliTest Answer: B QUESTION 2 You need to recommend which repository must be used for the REST service. What should you recommend? A. Team Foundation version control with Visual Studio Online B. Microsoft Azure virtual machines with Team Foundation version control C. Microsoft Azure Blob storage D. GitHub Answer: A QUESTION 3 You need to recommend a solution to ensure that the UI adapts to different devices. What is the best recommendation to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer. A. Create a single project and use VisualState B. Create a project for the phones, a project for the tablets, and a project for the laptops C. Create a single project and use a responsive .less file D. Create a single project and use the LESS CSS preprocessor. Answer: A QUESTION 4 You need to recommend a solution to monitor App1. What should you include in the recommendation? A. the Output window in Visual Studio B. Windows Performance Monitor C. Resource View in Visual Studio D. Class View in Visual Studio Answer: B QUESTION 5 You need to ensure that each computer in MainPage.xaml is displayed with an associated picture. What should you use? A. VisualStateManager B. DataTemplate C. AdaptiveTrigger D. VisualState Answer: C QUESTION 6 You need to recommend a source control solution for the development of App1. What should you recommend? A. Microsoft Azure virtual machines with Team Foundation version control B. GitHub C. Team Foundation version control with Visual Studio Online D. Microsoft Azure Blob storage Answer: B QUESTION 7 You need to recommend which tool to use to create the storyboards. What should you recommend? A. Microsoft Visio B. Microsoft PowerPoint C. Microsoft Visual Studio D. Microsoft Excel Answer: B QUESTION 8 Drag and Drop Question On the details page, you render the picture of the computer inside an object of the Rectangle type. You need to implement the ability to rotate the rectangle that contains the picture. How should you complete the code? To answer, drag the appropriate code elements to the correct targets. Each element may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
