QUESTION 161 You have a SharePoint Server 2013 server farm. You have a web applications named WebApp1. You have a SharePoint hosted app named App1. App1 contains a client Web Part named WP1. You add App1 to a site named Site1 in WebApp1. You need to prevent App1 from reading information in Site1. What should you do? A. From Central Administration, modify the permission policy of WebApp1. B. From Site Settings of the Central Administration site, delete App1 from the Site App Permissions list. C. From Central Administration, modify the users permissions of WebApp1. D. From Site Settings of Site1, delete App1 from the Site App Permissions list. Answer: D Explanation: Permission policies provide a centralized way to configure and manage a set of permissions that applies to only a subset of users or groups in a web application. Note: An app for SharePoint requests the permissions that it needs during installation from the user who is installing it. The developer of an app must request, through the app manifest file, the permissions that the particular app needs to be able to run. An app must be granted permissions by the user who is executing the app.

QUESTION 162 Drag and Drop Question You have a SharePoint Server 2013 server farm. You need to recommend which tools must be used to identify the causes of the following issues: Some users report that a specific Web Part page takes longer than 60 seconds to load. A user reports that a document that was uploaded to a site does not appear in search results. Which tool should you recommend for each issue? (To answer, drag the appropriate tools to the correct issues. Each tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Tools

- the crawl log
- the Developer Dashboard
- the Microsoft Message Analyzer
- the query health reports
- the SharePoint Health Analyzer

Answer Area

Some users report that a specific Web Part page takes longer than 60 seconds to load. Tool

A user reports that a document that was uploaded to a site does not appear in search results. Tool

Answer: Tools

- the crawl log
- the Developer Dashboard
- the Microsoft Message Analyzer
- the query health reports
- the SharePoint Health Analyzer

Answer Area

Some users report that a specific Web Part page takes longer than 60 seconds to load. the Developer Dashboard

A user reports that a document that was uploaded to a site does not appear in search results. the crawl log

QUESTION 163 Drag and Drop Question Your network contains an Active Directory forest named adatum.com. The forest contains a SharePoint Server 2013 server farm. Your company has an Active Directory Federation Services (AD FS) infrastructure that allows users from four partner companies to access resources in adatum.com. You create a new SharePoint Server 2013 web application named Web1. You configure AD FS to issue claims for Web1. You create an authentication provider for AD FS. You plan to grant the users access to Web1. You need to configure the farm to accept authentication requests from AD FS. Which three actions should you perform in sequence? (To answer, move the appropriate three actions from the list of actions to the answer area and arrange them in the correct order.)

Actions	Answer Area
Configure a claim as a unique identifier for the users.	
Export the token-signing certificate from the farm.	
Import the token-signing certificate from the farm.	
Import the token-signing certificate to AD FS.	
Export the token-signing certificate from AD FS.	

Answer:

Actions	Answer Area
Configure a claim as a unique identifier for the users.	Export the token-signing certificate from AD FS.
Export the token-signing certificate from the farm.	Export the token-signing certificate from the farm.
Import the token-signing certificate from the farm.	Export the token-signing certificate from AD FS.
Import the token-signing certificate to AD FS.	Configure a claim as a unique identifier for the users.
Export the token-signing certificate from AD FS.	

QUESTION 164 Hotspot Question You have a SharePoint Server 2013 server farm that contains a web application named WebApp1. WebApp1 uses classic-mode authentication. A company policy states that Central Administration must be used, whenever possible. In the table below, identify which tasks can be performed from Central Administration and which task can only be performed from Windows PowerShell. Make only one selection in each row. Answer Area

Web application	PowerShell
Configure WebApp1 to use claims-based authentication.	<input type="radio"/>
Create a new web application named WebApp2 and configure WebApp2 to use claims-based authentication.	<input type="radio"/>
Create a new web application named WebApp3 and configure WebApp3 to use classic-mode authentication.	<input type="radio"/>

Answer:

Web application	PowerShell	Central Administration
Configure WebApp1 to use claims-based authentication.	<input checked="" type="radio"/>	<input type="radio"/>
Create a new web application named WebApp2 and configure WebApp2 to use claims-based authentication.	<input type="radio"/>	<input checked="" type="radio"/>
Create a new web application named WebApp3 and configure WebApp3 to use classic-mode authentication.	<input checked="" type="radio"/>	<input type="radio"/>

QUESTION 165 Your company has a SharePoint Server 2013 server farm. You create a Business Connectivity Services (BCS) application. You deploy the application to the farm. Users create lists and add items to the lists based on the BCS application. The users report that when they search for data, BCS items are not displayed in the search results. Other items in the farm are displayed in the search results. You need to ensure that BCS data is displayed in the search results. The solution must minimize administrative effort. What should you create? A. a Local SharePoint Results result source B. an OpenSearch 1.0/1.1 result source C. a Line of Business Data content source D. a Custom Repository content source Answer: C Explanation: If your company has an on-premises SharePoint 2013 farm and a SharePoint Online 2013 tenancy, you can use BCS to create a secure connection between the two to make line-of-business (LOB) data available to applications for SharePoint and external lists in SharePoint Online. This is called a SharePoint BCS Hybrid solution. SharePoint Online 2013 supports only one-way connections from online to on-premises and to

only one on-premises farm. The LOB data must be published as an OData source QUESTION 166 You have a SharePoint Server 2013 server farm. The corporate taxonomy contains two term sets named Offices and Cities. You need to ensure that the terms in the Cities term set can be used by the Offices term set, What should you use? A. query refinement B. pinned terms C. managed navigation D. local properties

Answer: B Explanation: SharePoint 2013 adds the concept of Pinning to taxonomy and the term store management tool. You might first encounter the option to Pin instead of Reuse on the page to add a catalog connection from cross site publishing or as a new node in the menu for a term in the term store management tool titled "Pin Term With Children." While at least one reason for choosing Pinning is better understood in the context of search driven publishing the tangible difference between the two is actually concise. The difference is that while Pinning maintains a certain relationship (shared properties) between source term and Reuse instance on a one on one basis as Reuse does, Pinning also updates the hierarchy regarding the removal and addition of terms anywhere within that hierarchy. QUESTION 167 Drag and Drop Question A company has a SharePoint environment that contains one front-end web server and one database server. The company would like to ensure that employees can send email messages to document libraries. You need to configure the environment to receive email messages. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Actions	Answer Area
In Central Administration, configure incoming email settings.	
Configure document libraries to store incoming email messages.	
Install and configure the SMTP service on the database server.	
Configure SharePoint sites to store incoming email messages.	
Install and configure the SMTP service on the SharePoint server.	
In Central Administration, configure outgoing email settings.	

Answer:

Actions	Answer Area
In Central Administration, configure incoming email settings.	Install and configure the SMTP service on the SharePoint server.
Configure document libraries to store incoming email messages.	In Central Administration, configure incoming email settings.
Install and configure the SMTP service on the database server.	Configure document libraries to store incoming email messages.
Configure SharePoint sites to store incoming email messages.	
Install and configure the SMTP service on the SharePoint server.	
In Central Administration, configure outgoing email settings.	

QUESTION 168 You have a SharePoint Server 2013 server farm. You need to view the errors generated by a Web Part. What should you use? A. the Internet Information Services (IIS) logs B. the audit logs for the site collection C. the site collection health checks D. the SharePoint trace logs

Answer: D QUESTION 169 You deploy a SharePoint Server 2013 server farm. You receive a custom display template. You need to ensure that the custom display template is available in a site collection. What should you use to upload the template? A. Design Manager B. composed looks C. result types D. the Style Library

Answer: A Explanation: You can view existing display templates in Design Manager, but you don't create them in Design Manager the way that you create master pages and page layouts. Instead, you: * Open your mapped network drive to the Master Page Gallery. * Open one of the four folders in the Display Templates folder. * Copy the HTML file for an existing display template that's similar to what you want. The exact location that you copy the file to does not matter, as long as it is in the Master Page Gallery. * Open and modify your copy in an HTML editor. QUESTION 170 Your company has a SharePoint Server 2013 server farm that is integrated with Microsoft SharePoint Online. Users report that when they connect to SharePoint Online and perform a search, they only see search results from SharePoint Online. You need to ensure that when the users search from SharePoint Online, the results are displayed from the SharePoint Server 2013 farm and from SharePoint Online. What should you do? A. From SharePoint Online, create a content source and a search scope. B. From SharePoint Online, create a result source and a query rule. C. From

the SharePoint Server 2013 farm, create a result source and a query rule. D. From the SharePoint Server 2013 farm, create a content source and a search scope. Answer: B Explanation: Display hybrid search results in SharePoint Online <http://technet.microsoft.com/en-us/library/dn197174%28v=office.15%29.aspx> Step 1: Create a result source that defines how to get search results from the SharePoint Server 2013 deployment Step 2: Create a query rule to turn on hybrid search results in SharePoint Online 70-331 Updated Questions are 2015 Latest Released Which 100% will Meet in Your 70-331 Test!
