QUESTION 121 You are moving a customized SharePoint site collection to a new farm. You attach and mount the source content database in the destination farm. You need to ensure that all customizations from the source farm are available in the destination farm. What should you do? A. Copy all search indexes from the source farm to the destination farm. B. Configure alternate access mappings on the source server. C. Copy all custom master pages from the source site collection to the Style Library in the destination site collection. D. Copy all custom site definitions from the file system of the source farm to the destination farm. Answer: D Explanation: Note: * SharePoint Server 2013 customers can create their own site definitions that customize and extend standard SharePoint site templates. * To create a custom site definition with one or more custom site definition configurations on frontend servers, you must create a copy of an existing site definition directory. * For backup/restore and migration operations, you must restore your site to a server that has the same front-end customizations as the server from which you backed up or migrated. Site collection URL
http://hr.contoso.com
http://testintranet.contoso.com

You plan to migrate the environment to SharePoint 2013. You create a SharePoint 2013 site at the URL <http://testintranet.contoso.com>. You restore the database backups from the 2010 environment to the 2013 environment. You test the migration plan by migrating the Intranet_Content database to the new site. You need to verify that the test migration succeeds. Which Windows PowerShell cmdlets should you run? (To answer, drag the appropriate cmdlets to the correct location or locations in the answer area. Each cmdlet may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)
